Dynamic-HTML Challenge

This DOM challenge sees you building / creating a beautiful website that will bring back images based on a search parameter given by the user and how many images they want.

The design is supplied for this project by **Dean Singleton**, except for a lucky few people.

Levels for the challenge

There are a few different levels to this challenge. The easiest thing to do as a developer is be overwhelmed. Build up your website in small steps, don't just rush in. :-)

 Make a number of boxes (defined in the code) appear on the screen

Allow the user to specify how many boxes they want on the screen and display that on the screen

 Allow the user to clear all boxes via a clear boxes button

Add images dynamically to boxes using unsplash query:

https://source.unsplash.com/random/500x500/?sig=**\<randomNum\>**&**\<query\>** *bold needs modifying*

Good luck. Again.
